

ELWISON DENAMPO

elwisondenampo@gmail.com | +63 945 623 2885 | Cebu, Philippines | [Portfolio Link](#) | [Github](#) | [LinkedIn Profile](#)

SKILLS

- **Backend:** TypeScript, Node.js, NestJS, Express, Prisma, Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, REST APIs, JWT Auth, Socket.IO
- **Frontend:** Next.js, React, Astro, Vite, Tailwind CSS, shadcn/ui, React Query, React Hook Form, Zod, Zustand, Framer Motion, Recharts
- **AWS & DevOps:** AWS CDK, Lambda, API Gateway, DynamoDB, EventBridge, SSM Parameter Store, S3, Amplify, Docker, Turborepo, pnpm, Git, CI/CD, Vercel, Render
- **Integrations:** Stripe, DocuSign, SendGrid, Supabase, Sentry, Make.com, YouTube Data API, Spotify Web API
- **AI/ML:** OpenAI API, Groq API, LLM Routing, Prompt Engineering
- **Other:** C#, ASP.NET Core, Entity Framework Core, SQL Server, Hangfire

WORK EXPERIENCE

FULL-STACK DEVELOPER	Dr. Rena Malik, MD	Apr 2026 – Present
Web development for the world's most-followed urologist (2.9M YouTube subscribers, 600M+ views) — a podcast site rebuild on AWS serverless, a custom Stripe checkout, and a WordPress pre-order funnel for her debut book.		
Rena Malik, MD Podcast		https://podcast-new.renamalikmd.com/
<i>Astro 6, TypeScript, AWS CDK, Lambda (Node 22), DynamoDB, API Gateway, EventBridge, Amplify, SSM</i>		
• Built and shipped a 326-episode auto-updating static podcast site with CDK-managed AWS infrastructure (Lambda, DynamoDB GSI for chronological queries, API Gateway HTTP API, EventBridge cron) — the entire backend reproducible from a single <code>cdk:deploy</code> • Engineered an auto-rebuild pipeline — a daily cron Lambda upserts the Megaphone RSS feed into DynamoDB and POSTs to an Amplify build hook via an SSM-stored secret — taking new episodes from publish-to-live in under 24 hours with 0 manual deploys • Designed a 5-tier thumbnail resolution chain across the YouTube Data API v3, Spotify Web API, and RSS sources with bounded-concurrency parallel fetches, raising unique-artwork coverage from 86% to ~92% while staying inside API rate limits		
The Hard Truth — Pre-Order Funnel		https://renamalikmd.com/hardtruth/
<i>WordPress, vanilla JS, Stripe.js, Stripe Payment Element + Payment Intents, Make.com</i>		
• Built a custom Stripe Payment Element checkout (Apple Pay / Google Pay) replacing Stripe-hosted Payment Links — a 4-tier bulk pre-order flow (\$397–\$9,947) with a <code>payment_intent.succeeded</code> webhook contract to Make.com • Engineered a hybrid metadata-storage strategy for multi-address bulk orders (up to 300 ship-to addresses), working around Stripe's 500-char metadata limit via base64-CSV metadata for small orders and a Make.com Data Store keyed by Payment Intent ID for large ones		
SOFTWARE ENGINEER	FutureThink Hub & La Chow	July 2025 - May 2026
Shipped three production platforms — an AI-powered adaptive learning platform (FutureThink Edge), a unified property management SaaS (LaChowOS), and La Chow's public marketing site with a custom admin CMS — across full-stack development, database design, third-party integrations, and DevOps.		
FutureThink Edge		https://www.futurethinkedge.org
<i>Next.js, TypeScript, FastAPI, PostgreSQL, Redis, OpenAI API</i>		
• Engineered a full-stack adaptive learning platform serving 6 user roles with 86 REST API endpoints achieving P95 latency of 29ms under load — 85% below the 200ms SLA target • Architected a config-driven multi-LLM routing layer across 4 AI providers (Gemini, DeepSeek, Grok, Claude), reducing per-query cost ~60% via subject-specific model selection and a <5ms pre-LLM curriculum enforcement classifier • Scaled the backend to sustain 492 req/s under 500 concurrent users (k6, 590K+ iterations) and built 1,870+ automated tests (pytest, Vitest, Playwright E2E) eliminating 100% of type errors to reach Six Sigma 5.9 quality		
LaChowOS		https://portal.thelachow.com/
<i>Next.js 16, NestJS 11, Prisma, PostgreSQL, Stripe, Turborepo, AWS S3, Redis</i>		
• Architected a Turborepo monorepo (pnpm workspaces) shipping a NestJS 11 API with 52 feature modules, a Next.js 16 / React 19 frontend with 62 admin + 34 tenant-portal pages, and a shared Prisma package with 84 models generating type-safe clients across both apps • Designed a PostgreSQL schema with <code>tsrange</code> exclusion constraints + GiST indexes preventing double-booking of shared kitchen spaces at the database level, eliminating application-layer race conditions • Integrated 9+ third-party services: Stripe (rent + webhooks), DocuSign (eSignature lease workflows), SendGrid, AWS S3 (presigned-URL uploads + PDF parsing), QuickBooks, Supabase, Redis caching, Sentry, and DoorLoop (idempotent legacy import via externalId deduplication)		

PROJECTS	BSDOC - Personal Health Management Platform https://bsdoc-project.vercel.app/
	<i>Next.js, Node.js, Supabase, TypeScript</i> Health management platform with multi-role auth, admin panel, and doctor verification workflows. - Built 8+ REST API routes (appointments, doctors, availability, notifications, admin analytics) with JWT authentication and Supabase Admin client, handling ~300 req/min throughput - Engineered AI-powered fuzzy symptom search with 3-tier resolution pipeline (direct lookup → synonym match → corpus match) using string-similarity, reducing unresolved inputs by 78% - Implemented role-based access control middleware with Supabase SSR supporting 3 user tiers (patient/doctor/admin), achieving 100% route protection with single-DB-call role verification - Developed admin analytics dashboard with 5 concurrent Chart.js visualizations (bar, line, weight charts) and parallel API fetching, reducing dashboard load time by 60% - Architected end-to-end appointment booking pipeline with atomic slot conflict detection (**65% faster** via <code>.limit(1)</code> optimization) and transactional push notifications (~120ms delivery) - Integrated Supabase Realtime for live push notifications, eliminating polling and reducing bandwidth usage by 95%
	AI.pollo — AI Mood-Based Music Recommender https://ai-pollo.vercel.app/
	<i>React, TypeScript, Vite, FastAPI, PostgreSQL, Spotify API, Vercel</i> AI-powered mood-based playlist recommender using a custom Curated Intersect Algorithm that scrapes and scores 2,000+ tracks from curated Spotify playlists against listening history and ML feedback, achieving 44% faster recommendations than deprecated endpoints. - Engineered a 5-tier weighted scoring pipeline processing 2,000+ candidate tracks with <code>asyncio.gather</code> concurrency, reducing recommendation latency by 44% - Built real-time multiplayer Spotify Blend rooms with 5-letter shortcode matchmaking and group consensus scoring, cutting collaborative generation time by 67% - Implemented persistent ML feedback loop (thumbs up/down) biasing artist-weighting by +200 points, improving personalization hit-rate by 200% - Designed dual-layer content filter (16-token blocklist + popularity gating) eliminating 95% of junk tracks from scraped playlist results - Deployed serverless FastAPI backend on Vercel with stateless OAuth 2.0, automated Alembic migrations on cold boot, and async background data retention scheduler
	SchemaFlow — Interactive Schema Visualizer https://schemaflow-pi.vercel.app/
	<i>React 19, TypeScript, Vite, React Flow, Dagre, Zustand, Zod, CodeMirror 6, TailwindCSS</i> Interactive schema visualization tool that parses SQL DDL and JSON payloads into live ERD diagrams with field-level edge connections, auto-layout, and relationship labels. - Engineered a real-time SQL DDL and JSON schema parser processing 50-table schemas in < 2ms (~25K tables/sec), reducing manual ERD creation time by 95% using regex-based parsing and recursive descent - Architected a zero-latency React Flow transformation pipeline achieving 185K transforms/sec with Dagre auto-layout, field-level edge routing, and Zod runtime validation at 100% accuracy across 5,000 iterations - Built a multi-format export engine generating Mermaid ERD, Markdown docs, TypeScript interfaces, and mock REST API specs in 0.025ms per export (~40K exports/sec), enabling one-click schema documentation for Agile workflows - Developed an interactive schema visualization tool with CodeMirror 6 editor, localStorage persistence, dark/light theming, and keyboard shortcuts, delivering sub-5ms end-to-end render times for complex schemas with 300+ fields

CERTIFICATIONS	SEO Certification — HubSpot Academy Valid: Dec 2025 – Jan 2027
----------------	--

AWARDS	2nd Prize — Huawei ICT Competition (Network Track), Philippines (2025–2026) Demonstrated knowledge in SEO fundamentals, keyword research, ranking factors, and optimization strategies.
--------	---

EDUCATION	Bachelor of Science in Computer Engineering (Tertiary) August 2022 - May 2026 Cebu Institute of Technology - University (Cum Laude)
	Science, Technology, Engineering, and Mathematics Strand (Secondary) June 2016 - July 2022 University of Cebu - Pri (High Honors)
